Education

University of Michigan, Ann Arbor Aug 2025 – Dec 2026

Master of Science in Data Science

Coursework: Web Systems, Database Management Systems, Probability and Statistics, Natural Language Processing

Indian Institute of Technology (IIT) Kharagpur Jun 2018 – May 2023

BTech and MTech in Mechanical Engineering, ***Minor in Computer Science*** CGPA: 8.95/10

Coursework: Algorithms, Operating System, Object Oriented Programming

Experience

Rivian Volkswagen Technologies May 2026 – Aug 2026

Graduate Software Engineer Intern, Smart Vehicle Diagnostics Palo Alto, CA

- Built a Python **generative UI pipeline** turning LLM agent output into interactive apps, cutting triage time by ~**50%**
- Integrated it over ACP with a **LangGraph agent** that retrieves diagnostic trouble codes (DTCs) and alerts per VIN
- Generated JSONL UI specs from agent markdown via a second LLM (**Claude Sonnet**) in **under 0.5s** per segment
- Shipped a genUI output mode on the Server-Sent Events (SSE) streaming API with **zero breaking changes**

Amazon Jul 2023 – Jul 2025

Software Engineer, Alexa Sensitive Content Intelligence Team Bangalore, India

- Architected highly scalable cloud services in Java (AWS Lambda, ECS, DynamoDB), **99.99% uptime**, **50,000+ TPS** via load balancing, caching and data optimization
- Launched entry-point feedback ingestion service: accepts customer feedback, extracts 10+ fields, stores in DynamoDB, publishes to SNS for downstream consumption
- Implemented downstream microservice via SQS/SNS; connected to dialog history fetcher via REST API to enrich feedback with 3-turn context, persisting to DynamoDB
- Automated sentiment and policy-violation labeling via LLM classification (Claude Sonnet 3.5, Amazon Bedrock)
- Owned Risk Handler from high- and low-level design to production, mentoring an intern on implementation; scores risk from embeddings, frequency and LLM-derived severity in **less than 2s**
- Indexed 4+ data stores into Elasticsearch via an ingestion pipeline; delivered React dashboard for data insights and feedback flow monitoring, used by **10+ leaders**
- Engineered and led design reviews for Alexa ReportABug, a RAG-based LLM triage tool routing **150K+ reports/month**
- Resolved **10+ Sev-2 production incidents** across ~**10 on-call rotations**, restoring service availability

Amazon May 2022 – Jul 2022

Software Engineer Intern, In-Ads-Tech Team Bangalore, India

- Configured EventBridge to trigger remittance API every 4h; Lambda regex-filtered Deutsche Bank files (100% accuracy)
- Created microservice to extract 10+ tax and advertiser fields via internal authorized & authenticated API calls
- Deployed post-processing Lambda for remittance tracking at **less than 1s latency and 99% uptime**; **Received PPO**

Academic Projects

Multi-Agent Research Automation Platform Aug 2025 – Present

Agentic AI Researcher, University of Michigan (Prof. Scott Pletcher) Ann Arbor, MI

- Spearheaded a multi-agent platform: a master agent plans each query and orchestrates **6 specialized teams**
- Developed a 22-capability Research team automating PubMed/web retrieval, deduplication, and relevance ranking
- Constructed a 21-capability ChromaDB vector-database team for RAG: semantic/keyword search and clustering

Technical Skills

Languages: Java, Python, TypeScript, JavaScript, C++, C, SQL, Perl

Cloud & Backend: AWS (Lambda, ECS, DynamoDB, SNS/SQS), Microservices, Distributed Systems, REST APIs

Tools & Frameworks: React, Elasticsearch, Docker, Jenkins, CI/CD, Git, Linux

AI & Agentic: LLMs, RAG, Embeddings, ChromaDB, Prompt Engineering, Multi-Agent Orchestration, LangGraph

Publications

Mapping Fluid Structuration to Flow Enhancement in Nanofluidic Channels — J. Chem. Phys. (AIP) Jun 2023

Prediction of Cloud Server Job Failures Using KNN Classification and LSTM Modelling — IJERT Jul 2021
